

Driver's perspective

As a bus driver, I want to more easily receive information concerning rerouting in case of traffic disturbances so that I can avoid being late.

Requirements to be fulfilled

- Popup should be automatic
- It should not be text-based
- It should be easily understandable
- The popup should only appear if a reroute is in the vicinity (ie. it's relevant)

Traffic-leader perspective

As a traffic leader I want to easily inform reroutes to a certain set of busses so that the information can't be misinterpreted.

Requirements to be fulfilled

- I should not have to repeat any of the information
- It should not be affected in any way by language barriers
- It should be simple and intuitive to send out the information
